

Simple text editor

In this assignment, create a simple text editor that has the ability to open a file, save it, and edit it.

This program has a text box that covers the entire program space. It also has a File menu that has two options: Open and Save. The keyboard shortcut for Open is Ctrl + O and for Save is Ctrl + S.

There are two scenarios for using this program:

- The user runs the program and enters a text into the text box. Then, by selecting the Save option, a file path selection dialog will be opened and the path and file name will be received. Then the file with the selected name is saved in the selected path.
- The user runs the program and selects a file using the Open button and the file selection dialog and puts its content in the program. Then the user edits the content of the file and saves it with the Save button. The difference of Save in this scenario is that the dialog is no longer opened for the user and the file is saved in the same path and with the same name.

Tip : You can use the QFileDialog class to use the file selection dialog.
