

Warm hand - reverse printing

- Time limit: 0.5 seconds
- Memory limit: 256 MB

** This question is just to warm your hand and familiarize you more with using arrays, and it has no special value outside of that!**

Write a program that receives a number from the input at each step and continues until zero is entered. After the zero digit is entered, this program should print the entered numbers in reverse order.

Input

The way to enter is that one number is entered in each line. The number of numbers in the input is less than 1000. It is guaranteed that the number 0 appears at the end of the input only once and the other numbers in the input are natural numbers at most 1000.

Input and output

In the output, one number should be printed in each line

In the output, one number should be printed in each line.

Example

Sample input

```
3
4
7
4
9
0
```

Sample output

```
9
4
7
4
3
```
